

COOLSERVE

CARE BOOK

MESSAGE from

the DOCTOR of AIRCON™

We would like to share some of the basic guides on home air-conditioner system maintenance and safety precautions with you. Understanding the basic DIY aircon maintenance will enable you and your family to live in a healthier environment, save on electricity and repair bills and also to increase the life span of the system.

If you encounter any problem or should you have any enquiries on technical aspect of aircon, please feel free to call us.

We will always be at your service!
Thank you for your time.

Yours sincerely,
COOLSERVE
Air-Condition Engineering
1800-AIRCOND

SAFETY PRECAUTIONS

Do not connect many devices to one AC outlet and check if there is any damage to the power cord.

A fire or an electric shock may result from poor contact, poor insulation, exceeding the permissible current, etc

Installation, repair or relocation should not be done by the customer.

If this is done incorrectly, it may cause a fire, an electric shock or an injury from the unit falling, water leaking, etc.

It's always better to consult your dealer.

Do not turn the breaker on/off or disconnect the power supply plug during operation.

This may cause a fire due to spark.

Be sure to switch off the aircon before turning off the breaker or disconnecting the power supply plug.

When an abnormality (e.g. burning smell) occurs, switch off the aircon and disconnect the power supply plug or turn off the breaker.

If the unit continues to operate in abnormal condition, it may cause a fire or power trip.

Avoid continuous direct air flow to the occupant especially in case of those sleeping or a patient.

This could damage your health.

Do not put hands or objects into the discharge grille of outdoor unit or the outlet of the indoor unit.

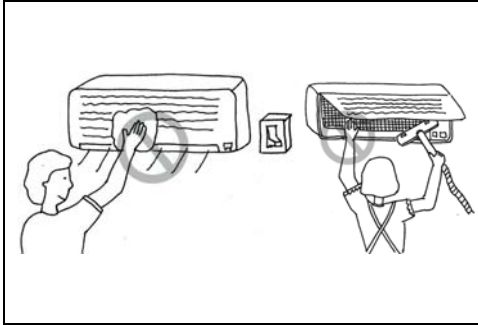

Since the fan rotates at high speed, this may cause an injury. Thus, young children must be supervised to ensure they do not play with the aircon.

Warning!

Do not clean the aircon with water or operate switches with wet hands.

Water may enter the unit if it is clean with water and this will degrade the insulation. This may cause an electric shock.

When the unit is to be cleaned, switch it off and disconnect the power supply plug or turn off the breaker. Do not touch the metal parts of the unit once the air filter is removed.

This may cause injury.

Ventilate the room air when the room becomes stuffy or filled with undesirable odors.

A shortage of oxygen may occur.

Do not use inflammable sprays near the unit.

The unit can be damaged by gasoline, benzene, thinners, insecticides and other chemical agents.

Keep heat sources away from the unit. High temperature can cause damage.

Do not put a pet or houseplant where it will be exposed to direct airflow.

This could injure the pet or plant.

Do not use the unit for special purposes.

Do not use the aircon to preserve precision devices, food, animals, plants and art objects.

This may cause deterioration of quality.

Before starting maintenance

Turn off the breaker and/or disconnect the power plug.

CAUTION

When the unit is to be cleaned, switch it off and disconnect the power supply plug or turn off the breaker. Since the fan rotates at high speed during operating, it may cause an injury.

Cleaning the Indoor Unit

Clean the unit using a soft dry cloth

Do not pour water onto the unit, and do not use petrol solvents or abrasive powder resulting in damage of the unit.

Cleaning the air filter

Remove the air filter

CAUTION: When the air filter is to be removed, do not touch the metal parts of the indoor unit.

Remove the dirt from the air filter by cleaning it with vacuum cleaner and then rinsing it under running water.

If the dirt is conspicuous, wash the filter with a solution of detergent in lukewarm water. If hot water (50 °C or higher) is used, the filter may be deformed.

After washing with water, dry the air filter well in shade and then slide the filter back into the track provided.

Do not expose the air filter to direct sunlight or heat from a fire when drying.

Cleaning the deodorizing filter

Remove the air filter, and then remove the deodorizing filter (Gray sponge type)

Soak the filter together with its frame in lukewarm water for about 15 minutes.

Do not use a scrubbing brush or sponge. This may damage the surface of the filter.
Do not use a chlorine detergent.

After washing the deodorizing filter, dry the filter well in the shade. Install the deodorizing filter and air filter after cleaning.

Do not expose the air filter to direct sunlight or heat from a fire when drying.
